The School of Psychology invites you to a Special Seminar with

Prof. Dan Zakay

The School of Psychology, IDC Herzliya

On:

"Recent Studies in the domain of Psychological Time"

Tuesday, May 15th 2012, at 10:30

Faculty room
IDC Herzliya Campus

Psychological time is an essential domain for organisms adjusting to their environments. Yet, no perceptual mechanism is known which is responsible for the perception of the flow of time. It seems that cognitive processes are responsible for that. There are two types of psychological times: retrospective and prospective. Whereas the first one is based on memory the second one is based on attention.

Recent studies which deals with the following issues, will be presented:
What are the specific attentional mechanisms which are linked with prospective timing.
What is the role of prospective timing in meta-cognition?
How can prospective timing explain daily behaviors like waiting in lines?
Why time "slows-down" in old age and in pregnancy?

You are invited!
