The School of Psychology invites you to a Special Seminar with

Dr. Tami Katzir

Chair of the Department of Learning Disabilities
University of Haifa

On:

"Slow and steady is not always better: The cognitive and Brain Basis of Reading Fluency in Adults and Children”

Thursday, December 6\textsuperscript{th} 2012, at 10:00
Faculty room, IDC Herzliya Campus

Reading Fluency is a critical factor in the development of literacy skills. Many children with reading difficulties never become fluent readers. In this talk I will first examine the behavioral and neurological correlates of fluency in children and adults. Next, I will describe the relationship of fluency to reading comprehension and self-concept. Finally, I will propose an intervention model to enhance fluency in different populations.

You are invited!
