So, you got a CS degree (or are getting one). And you might have heard of information security (or are in the security courses here). But what is it REALLY like out there? In this talk we'll go over some of the common information security practices, and will try to go beyond the common. Infosec cannot stand by itself in the real world. There is a huge gap between the theoretical practice of it, and the kinds of attacks and threats that real are out there.

We'll discover the tangents where infosec meets economics, law, politics, physical security, psychology, and other elements that you are (or should) be studying here. Join me as we go down the rabbit hole.

With over a decade of experience in the information security industry, Iftach Ian Amit brings a mixture of software development, OS, network and Web security expertise as Director of Services to the top-tier security consulting firm IOActive.
