Interestingly, the original initiative to develop wearable devices (hardware and software) came from engineering, not from product / business people. The talk describes how engineers can strive for innovation while keeping production running. In particular, we'll discuss rapid prototyping techniques and an agile approach for development that is proven to get results.

Natan Shaltiel is a software architect at Vonage R&D. He is a technology manager who specializes in iOS and Android apps, 3-tier systems, voice and video over IP, gaming and performance driven software, and multi-threaded, multi-service systems over the cloud. Natan holds an Msc. in computer science from the Hebrew University. He served as a senior software developer and team leader at 8200 and Fring, and as VP R&D at Tabtale.
