We'll describe how we build complex systems in Vonage Mobile. We'll talk about the MVC model, the pros and cons of a patch (and when does patchy code come back to haunt us), when to redesign, when to patch and how, QA considerations, how to create maintainable code, and how it all relates to what we learned in school.

Natan Shaltiel is a technology executive with vast experience in cutting edge start-up companies in multiple stages. Previous experience includes iOS development team leader at Fring and VP R&D at Tabtale. Natan holds a Msc. in computer science from the Hebrew University. He served as a senior software developer and team leader at the 8200 intelligence force.
