In this talk Ittai Golde will talk about Parse.
Parse, a startup acquired by Facebook two years ago, experienced a huge growth spurt, going from 5,000 apps built on top of its PAAS to over 60,000 apps and 800,000,000 active mobile installations. In this talk he will describe how Facebook rewrote all of the code in its server without having any downtime (much akin to replacing an engine in airplane mid flight).
We will also be speaking about Graduate and Summer Internship opportunities within our Facebook office in Tel Aviv.

Ittai Golde, is a software engineer at Facebook.
He is currently managing the backend team and the develops teams for Parse, a PAAS start up acquired by Facebook 2 years ago, currently installed on 800MM mobile devices.
