Setting-up POST email addresses in mobile devices

If you were assigned an IDC email address, you can access your account on your mobile phone. Popular devices have different operating systems, and while some are able to identify the email server automatically, some require more detailed settings.

1. Access your "Settings" menu (icons may vary between devices).

2. Under "Accounts & Synchronization" go to "Add account." Choose "Corporate" or "Exchange," depending on your device.

3. Type in the full email address: (name)@post.idc.ac.il and your password. Tap "Continue".
   
   Androids and iPhones may ask for the server name: outlook.office365.com
4. Some devices may ask for the user name and password again. Type in your full email address: (name)@post.idc.ac.il and your password

5. Approve the rest of the device's requests, until it signals the set-up is complete.

6. Your email application should now show your IDC email.

Good luck!
